

MOBILE - MONEY PAYMENT VERIFICATION

KODA

A screenshot can be faked.
The SMS can't.

Stop losing money to fake payment screenshots. Verify every mobile-money payment against the operator's own confirmation SMS — in seconds. Free to start.

THE PROBLEM

Every fake screenshot is money out of your pocket.

You can't tell what's real

A screenshot is edited, reused or invented in seconds — and it looks exactly like a genuine one.

The goods leave, the money doesn't

Release the order against a fake confirmation and the loss is yours — instantly, and in full.

Checking by hand burns your day

Scrolling SMS and matching payments one by one doesn't scale past a handful of sales.

YOUR CUSTOMER

"I've paid! Here's the screenshot 📸"

"...is it real?"

You, every day — with no way to know.

WHY YOU'RE STUCK WITH SCREENSHOTS

The “real” fix is a telco contract you'll never get.

Direct operator API access means 6-18 months of B2B negotiation — per telco, per country.

And small and mid-size merchants are routinely turned away at the door.

So millions of sellers are left with the screenshot. Until now.

TIME TO GO LIVE

Telco API deal

6-18 months

KODA

minutes

No integration. No contract. Nothing to install on the telco side.

THE INSIGHT

The operator already sends a
confirmation SMS.

That SMS is the API.

KODA reads the SMS you already receive — reference, amount, sender, running balance — and turns it into verifiable, replay-locked truth. No operator integration. Ever.

HOW IT WORKS

Your customer pays exactly the way they paid yesterday.

1

Customer pays

Mobile money to your normal merchant number — nothing new to learn.

2

Operator SMS lands

The confirmation SMS arrives on your phone, exactly as it always does.

3

KODA reads & matches

It parses the SMS, matches the customer's code, and runs the fraud checks.

4

Verdict in ~3 s

Delivered where you work: a webhook, a  in the chat, or a green card in the console.

THE ONLY REQUIREMENT

If your operator texts YOU when you're paid, KODA works.

KODA verifies against the confirmation SMS your mobile-money operator already sends to your merchant number.
The whole checklist:

You accept mobile money

Orange Money, M-Pesa, Airtel, Afrimoney, MTN, Wave — and 200+ more operators.

The confirmation SMS lands on your phone

The one your operator sends to your merchant number every time you're paid.

That's it — you're ready

No new SIM. No new number. Nothing for your customer to download or install.

MEETS EVERY MERCHANT

One engine. Five doors.

From a smartphone checkout to a feature phone with no internet — your customer confirms however they can.

Manual

Paste the code in the Verify Console — no code to write.

WhatsApp

The code dropped in the chat is verified in-channel.

API / drop-in

Three endpoints, a widget, and signed webhooks.

USSD

Dial a shortcode — any phone, no internet.

Inbound SMS

Text the code (or forward the SMS) to verify.

ANTI-FRAUD, BY DESIGN

Built to be lied to.

The truth is merchant-side and operator-issued — never anything the buyer can type or edit.

Single-use, forever

One reference confirms one payment and is locked for life — replays are rejected.

Balance-chain forgery test

On device streams, the running balances must add up — a forged SMS breaks the chain.

Amount & currency guards

A code only clears if the amount, currency and window all line up with the order.

Three honest confirmation tiers

Every receipt says how strongly it's proven — self-reported, device-anchored, or operator cross-confirmed.

WHAT KODA IS — AND ISN'T

We verify your payments. We never touch your money.

KODA IS

A payment VERIFICATION service. It reads the operator's confirmation, fraud-scores and replay-locks it, and tells you in seconds what's real.

KODA IS NOT

A bank, wallet, payment processor, aggregator, escrow or money transmitter. It never holds, moves or settles funds.

Your money travels directly from customer to you, over the operator's own network. Verification is based on merchant-side operator confirmations — fraud-scored and replay-protected — but does not guarantee against operator-side reversals or constitute proof of settlement. KODA makes you first to know.

Coverage is a parsing map — not a pile of telco deals.

235

operators in the registry

95

countries

12

world regions

111

template families

6 hand-tuned LIVE packs today and climbing — auto-verify, hands-free. Every other operator is **template-ready**: a multilingual generic parser already structures its SMS at a lower trust band until a precise pack ships. Nothing is claimed as fully supported when it isn't — and no operator API is ever required.

THE MODEL

Free until your merchant actually gets paid.

Marché	Boutique	Commerce	Plateforme	Scale	Enterprise
\$0	\$5	\$20	\$100	\$399	Custom
10 / mo · forever	190 verifs / mo	760 verifs / mo	3,800 / mo	15,200 / mo	committed volume

“Pay only when your merchant gets paid.” Start free forever — 10 verifications a month, no card. Beyond your quota, prepaid ACU (topped up via mobile money, verified by KODA’s own engine) covers overage. A plan’s included rate always beats pay-as-you-go.

START IN THE NEXT 10 MINUTES

Free forever. No card. No contract.

1

Sign up free

Create your account in a minute — 10 verifications every month, free for life.

2

Add your mobile-money number

The merchant number the operator's confirmation SMS already lands on.

3

Verify your first payment

Paste the customer's code — a fraud-checked verdict in about three seconds.
